- Shallow Fabric Stacking
- Low Threshold Door Bar

Description

Designed for flexible fitting inside or outside a recess, Sliderscreen Pro features a stable double-frame design that makes installation easier and operation smooth. It is especially suited to larger doors, with an optional low-threshold door bar and effective light blockout.

Profile and Dimensions

Product Life and Warranty

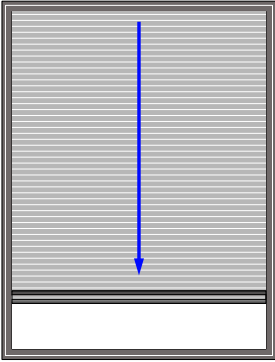

Frame and fabric are covered by a one-year warranty, including discoloration and frame degradation. Inner cording must be correctly routed at installation, and any cord breakages will require workshop servicing.

Size Limitations

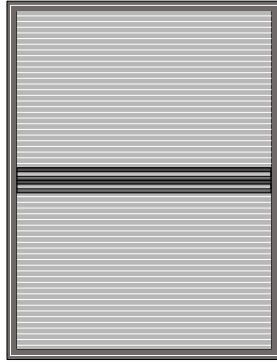

- H-Screen 1500mm x 2000mm
- V-Screen 2950mm x 2400mm (smaller single frame sizes apply)
- Split Stack recommended after 2600mm wide

Sliderscreen PRO

Configuration Options

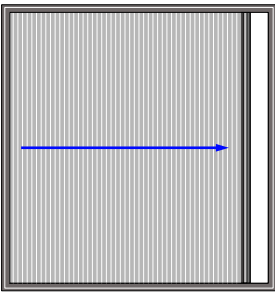

H-Screen - Top Down

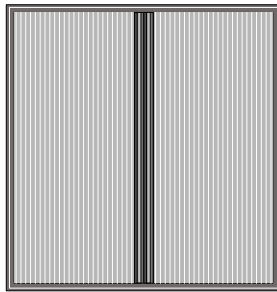

H-Screen - Split Stack

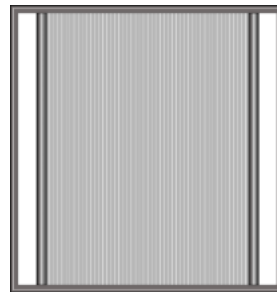

Screens are available with horizontal (V-Screen) or vertical (H-Screen) fabric orientation, with horizontal screens operating up and down and vertical screens moving side to side. To ensure reliable long-term performance, H-screen sizes and features are intentionally limited. Choose from single- or double-screen configurations, with double screens offering the flexibility to combine a flyscreen with blackout or light-filtering fabric for day and night use.

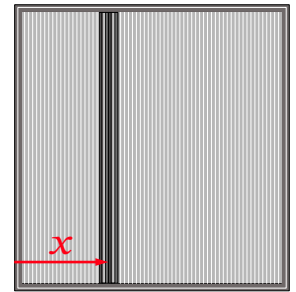

V-Screen - One Way

V-Screen - Split Stack

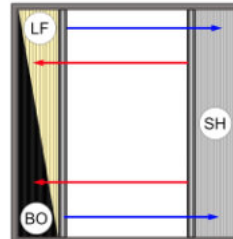

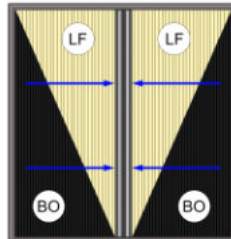

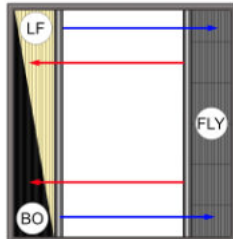

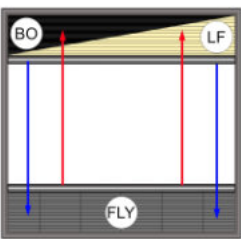

V-Screen - Opening Both Sides

V-Screen - Offset Split Stack

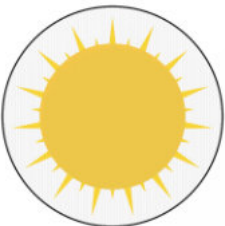

Double Fabric Configurations

Double Fabric Blinds will ensure that each fabric can draw across the blind fully, offering two modes of use.

Fabric Types

Sheer Honeycomb

Light Filtering Honeycomb

Flyscreen Mesh

Blockout Honeycomb

Fly Screen Mesh - A durable mesh available in white or black, designed to allow airflow while helping keep insects out.

Blockout Honeycomb - A cellular blackout fabric designed to reduce heat transfer, improve thermal insulation, and provide a high level of light control and privacy.

Light Filtering Honeycomb - A light-filtering cellular fabric that softens incoming light while maintaining privacy and creating a bright, comfortable interior.

Sheer Honeycomb - A sheer cellular fabric that works like a voile, gently diffusing daylight while providing daytime privacy.
